CUSTOMER-OWNED TRANSFORMATION RATES

POWER STANDARD RATE – CAPACITY RESERVATION SERVICE

This rate applies to Power Class customers requiring capacity reservation who are served through customer-owned transformation and self-generating a portion of their power requirements using non-renewable sources. Customers installing renewable self-generation are eligible to remain on their current published rate.

Self-Generation Sources: Renewable self-generation sources include solar, wind, flare gas, biomass, geothermal and hydropower generation. All other sources are considered non-renewable.

Reservation Capacity: The customer must nominate in writing the reservation capacity in kVA to be provided by SaskPower. The nomination shall provide details of how the Reservation Capacity was determined.

SaskPower provides no guarantee that any loads taken in excess of the customer's reservation capacity will be available. SaskPower may install protective equipment to limit the customer to their nominated capacity if it believes those facilities to be at risk due to load uptakes in excess of their nominated capacity.

The customer may submit a written request to **increase** the Reservation Capacity at any time. All requests for capacity increases will follow SaskPower's regular load interconnection process. 12 months after the original nomination of Reservation Capacity or 12 months after any subsequent change to the Reservation Capacity, the customer may submit a written request to **reduce** the Reservation Capacity. Every request to change the Reservation Capacity should include details of how the new Reservation capacity was determined.
